

Urine Specimen Collection Kit Instructions

Domestic

Pricing Update Effective October 16, 2017

Information for Urine Specimen Kit:

- Samples should be shipped as soon as possible.
- Refrigerate all samples until ready to ship.
- IGenX, Inc. is closed on weekends and cannot receive samples.
- Test Requisition Form must be completely filled out, including all required signatures. Missing information may result in the delay of testing.
- Include prepayment (We accept Visa, MasterCard, Discover, American Express, Personal Checks, Money Orders).
- Once your payment has been processed, a Statement will be mailed to the patient to submit to insurance.
- If you have Medicare (Part B) coverage, include a copy of the front and back of your Medicare card and/or Primary Insurance card. (Refer to Payment and Billing Policies for details)

Urine Collection:

*******Follow your physician's instructions for collection days and times*******

1. Collect first morning clean catch, mid-stream sample of urine in the collection cup provided.
(Please refer to Instructions for Clean Catch on page 2)
2. Transfer urine into gray top BD Vacutainer tube (REF#364953):

EACH DAY OF URINE COLLECTION REQUIRES TWO (2) TUBES
 - a. Carefully pull gray top off tube.
 - b. Place transfer pipette in the urine cup.
 - c. Squeeze top of transfer pipette to vacuum urine into pipette.
 - d. Pipette urine into the tube and fill tube past the minimum fill line indicated on the manufacturer's label.
 - e. Remove pipette from tube and place pipette back into the urine cup.
 - f. Place gray top back onto the tube.
 - g. Gently invert tube 8-10 times to mix preservative with the specimen.
 - h. Repeat steps a-g for second tube. Repeat for each day of collection.
3. **REQUIRED:** Label tubes with enclosed white labels: patient's first and last name, date of collection, patient's date of birth.
Note: Two (2) tubes should have the same collection date.
4. Place labeled tubes into the white absorbent tube holder.
5. Place all white tube holders inside silver bubble pouch, seal.
6. Insert silver bubble pouch into the enclosed Biohazard plastic bag.
7. Place Biohazard plastic bag in the box and store in refrigerator until ready to ship.
8. Place Test Requisition and all other required paperwork inside the box.

Shipment of Specimen Kit:

1. Place Specimen Kit box inside the UN3373 FedEx Pak and seal the bag shut.
2. A prepaid 2 Day Label has been placed on the outside of the bag.
3. Keep enclosed FedEx receipt for tracking of your package.
4. Take the package to your nearest FedEx location. Visit <https://www.fedex.com/us> or call (800) 463-3339 for assistance with your shipping needs.

Instructions for Collecting a Clean Catch Urine Sample:

Instructions for Females

***Please note: If you are menstruating, replace used tampon with a fresh tampon before proceeding.**

1. Wash hands with antibacterial soap and warm water
2. Spread the labia (folds of skin) apart with one hand (Do not touch area as it is now considered sterile)
3. Wipe with the towelette provided
4. Continue holding the labia apart. As you start to urinate, allow a small amount of urine into the toilet. (This will eliminate any contaminants. AVOID contact with inside of urine collection cup)
5. After the urine stream is well established, urinate into the provided sterile cup until an adequate amount of urine fills the cup (maximum 60ml/ 2oz)
6. Remove collection cup from the urine stream and pass the remaining urine into the toilet
7. Transfer urine sample into gray top tubes (Please refer to Urine Collection Instructions step 2 through 6)

Instructions for Males

1. Wash hands with antibacterial soap and warm water
2. If uncircumcised, retract foreskin
3. Wipe the end of penis with towelette provided. As you start to urinate, allow a small amount of urine into the toilet. (This will eliminate any contaminants. AVOID contact with inside of urine collection cup)
4. After the urine stream is well established, urinate into the provided sterile cup until an adequate amount of urine fills the cup (maximum 60ml/ 2oz)
5. Remove collection cup from the urine stream and pass the remaining urine into the toilet
6. Transfer urine sample into gray top tubes (Please refer to Urine Collection Instructions step 2 through 6)
